develop your
American Express
payment interface.

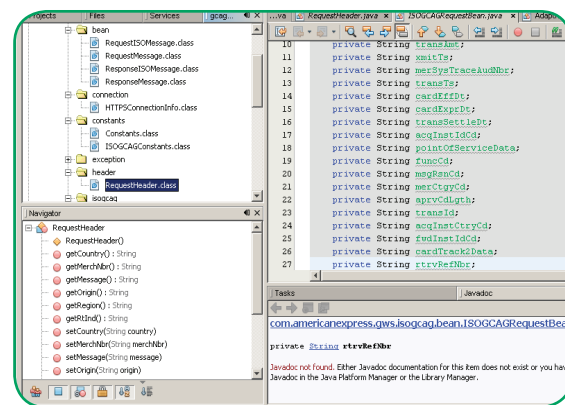

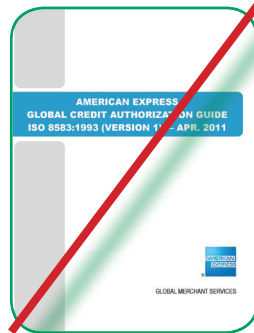

American Express Payment SDKs

Why spend unnecessary time on integration? Our payment Software Developer Kits (SDKs) deliver the tools you need to help minimize the development time to build and certify for a direct transaction processing solution. By processing directly with American Express, merchants may avoid processing fees, get paid sooner, and minimize potential points of failure for their American Express® Card transactions.

our payment SDKs help you

Whether you're a merchant, third party processor, gateway, or point-of-sale manufacturer, SDKs can help you reduce your time to market and eliminate coding to cumbersome technical specifications.

- o **accelerate** development and certification of direct processing with American Express
- o **integrate** American Express payment solutions to your point-of-sale applications or systems
- o **innovate** new solutions through creative use

Developer Environment Screenshot

what's included in the SDK

Our SDKs are downloadable from our website and include the following items:

- o **documentation** – developer guides
- o **sample application** – a full-featured, functioning app
- o **sample code** – source code, example code
- o **integration code** – Jar files (Java) and DLLs (.NET)

features of our SDKs

- o SDKs available in Java and .NET
- o Authorization SDK manages the communication elements to integrate with our Internet Direct platform as well as VPN and MPLS
- o Submissions SDK manages communication with American Express Secure File Transfer (SFT) for a secure payment solution
- o uses the American Express global standard specifications
- o provides access to American Express fraud prevention tools and value added services associated with transaction processing
