

INTRODUCING EXPRESS LIST: THE SAFE, EASY WAY TO CONTINUE SHOPPING ONLINE.

New regulations will change the way your Cardmembers make purchases online and American Express® is making the online payment process easier with fewer one-time verification codes.

In response to a new regulation, American Express has designed Express List, a secure solution to help minimise disruption when shopping online.

At the end of an online shopping journey, when prompted simply add preferred or regular webshops to Express List, and in future your Cardmembers will be sent fewer one-time verification codes to complete the transaction at these trusted webshops, unless we need to make sure it's them.

Online transactions will continue using our secure, fraud protection system – SafeKey to ensure it's your Cardmembers making purchases.

SafeKey® Setting up an Express List

1

Next time your Cardmembers shop online and see SafeKey at the end of their journey, 'Express List' will appear.

2

Express List is a personalised list of webshops your Cardmembers frequently shop at. They can choose the individual webshops they want or 'Select all' to add all of the previous webshops they've made purchases at.

Fewer codes gives your Cardmembers a seamless checkout experience.
