

# Modernizing Virtual Card acceptance

The traditional invoice-to-cash process can be slow, with many businesses still relying on paper checks and manual processing. For B2B Merchants, late payments can delay projects, stifle cash flow and strain Buyer-Supplier relationships. Automating your Virtual Card acceptance can help create a more streamlined and secure payments experience.<sup>1</sup>

## B2B spend is going digital

**\$5.2 trillion** in 2025<sup>2</sup>

**\$17.4 trillion** predicted revenue by 2029<sup>3</sup>

88% of global financial leaders are embracing Virtual Cards.<sup>4</sup> Yet many suppliers still process them manually, creating friction and delays.

Virtual Cards help streamline manual payments by removing delays, minimizing friction and improving transaction security.<sup>5</sup>

## So why are many B2B businesses resistant to adoption?

### Familiarity with inefficiency

While Buyers move toward digital payment methods, accounts receivable (AR) teams are often hesitant to accept Virtual Cards. But this widespread use of legacy systems often comes with:

- Inefficient processing
- Increased manual labor
- Complicated reconciliation<sup>6</sup>

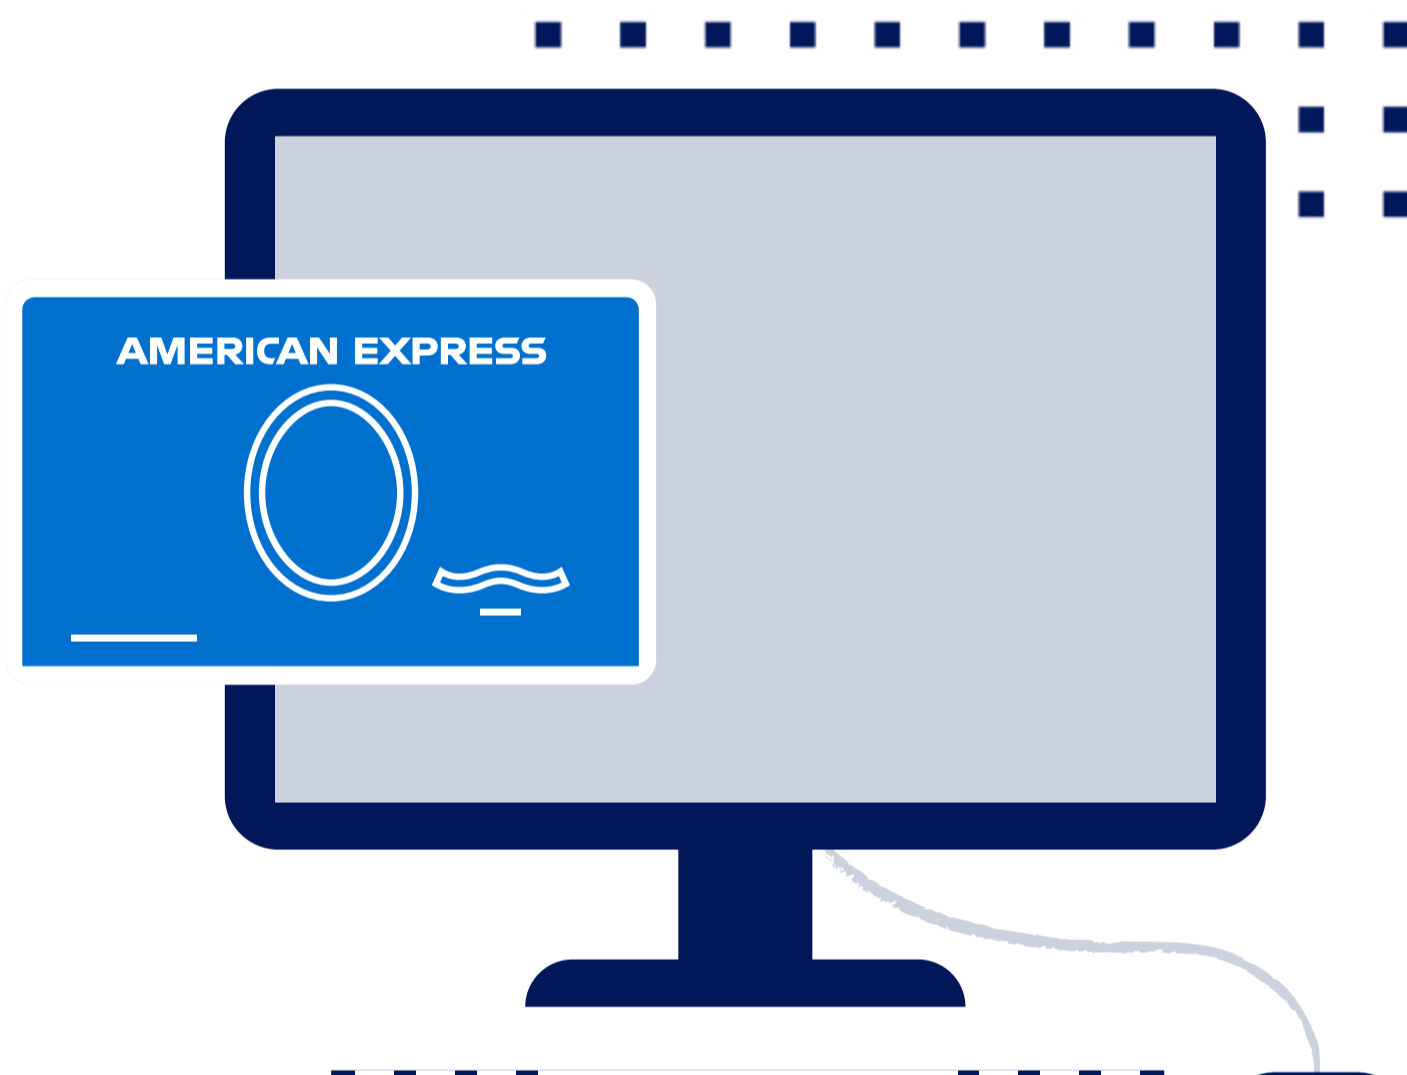

With straight-through processing (STP), your receivables can work harder for your business.

### Process with purpose

STP is a fully automated B2B payments process designed to:

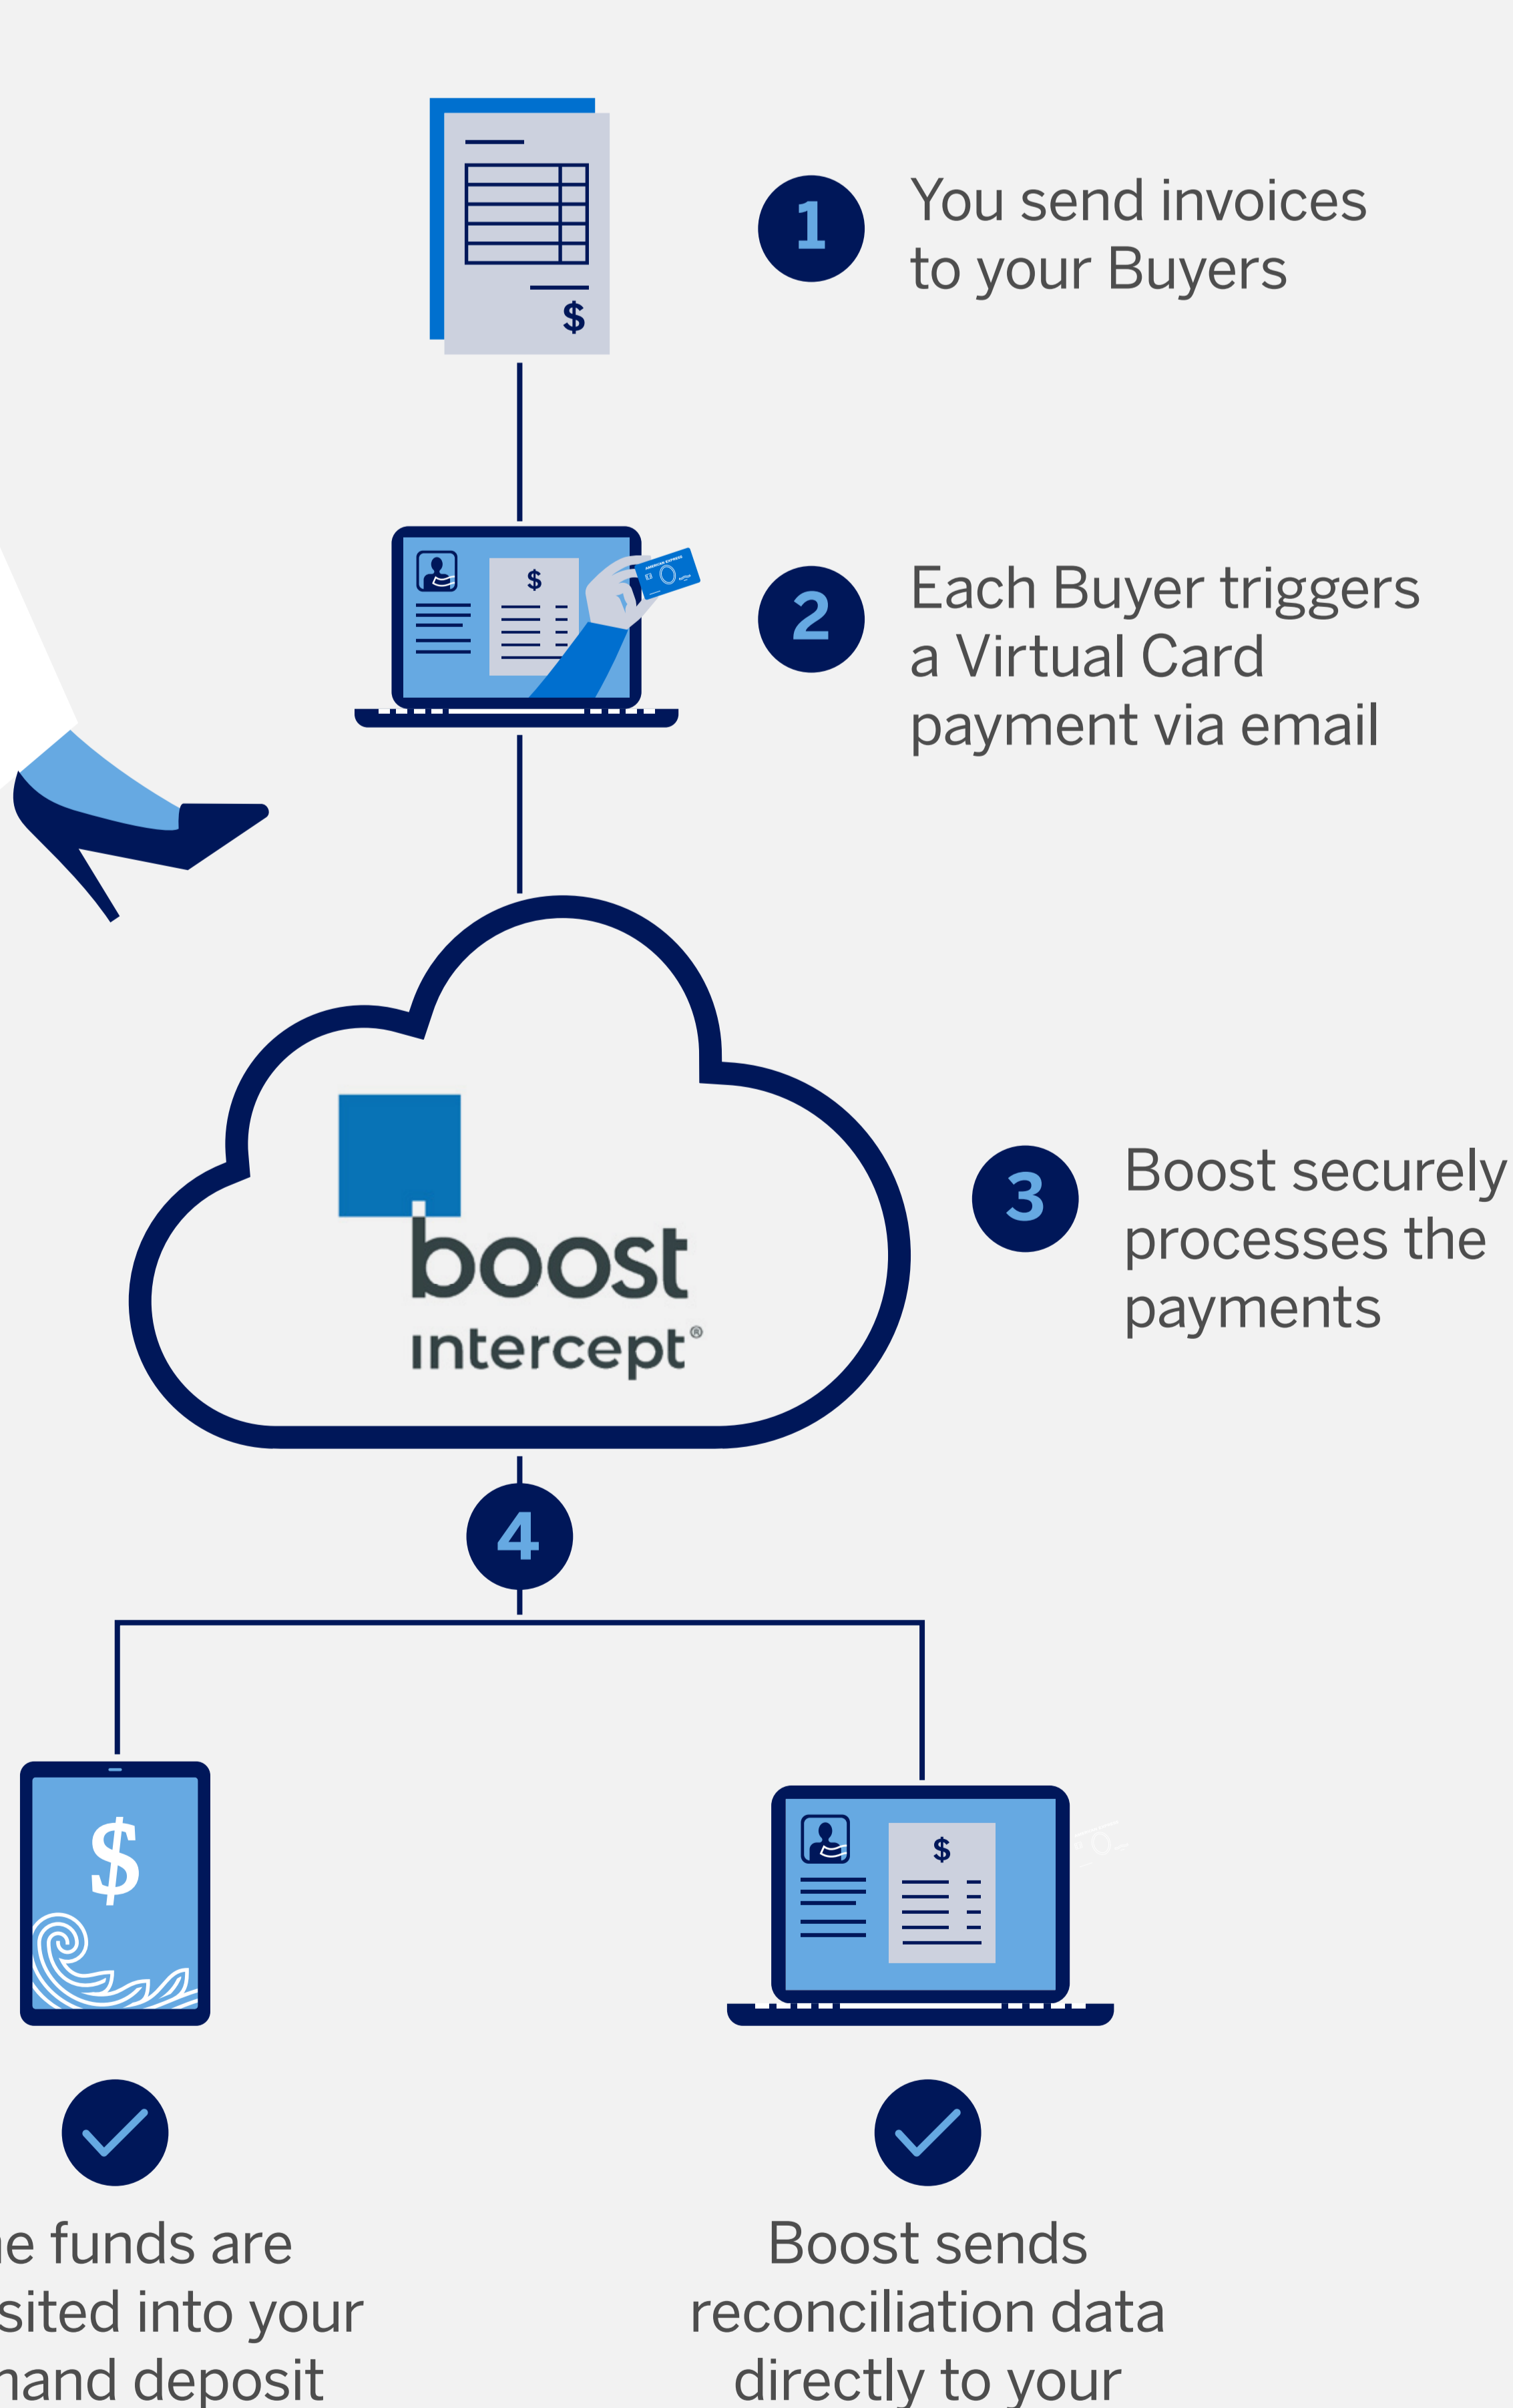

- ✓ Expedite payments
- ✓ Streamline remittance
- ✓ Bolster payment security
- ✓ Increase AR efficiency<sup>7</sup>

With Boost Intercept's patented STP technology, Buyers and Suppliers can benefit from a hands-free payment solution and instantly available remittance data — no extra software or training necessary.<sup>8</sup>

### Here's how it works

## Assess your AR readiness

Straight-through processing with Boost Intercept can help you facilitate timely, secure payments and more accurate reporting without emails or manual keying. See what straight-through processing can do for you.
